Purpose and Need

Runway safety area improvements needed on Runway 4-22

The purpose of the Proposed Action by Evansville-Vanderburgh Airport Authority District (Sponsor) is to provide the airport with improvements which meet Federal Aviation Administration design standard criteria, to enhance the operating safety conditions at the Airport and to allow the Airport to achieve its airfield goals. The need is to remove nonstandard runway safety areas and reclaim full use of the primary runway length because it currently does not meet the design criteria for the critical aircraft at the Airport
